

SoChlor™ WIPES

Surface Disinfection

SoChlor Wipes are designed for impregnation with SoChlor disinfectant solutions for the rapid and easy disinfection and cleaning of surfaces and medical devices. The wipes are made of high quality, lint-free non-woven material. Due to their cross-linked woven structure SoChlor Wipes are outstandingly hard-wearing and tear-resistant.

Combined with SoChlor™ DST

The wipes are designed to be used with SoChlor DST disinfectant and cleaning solution made from tablet dilution. SoChlor Wipes are specially developed for surface disinfection. The non-woven material ensures the exact release of the disinfection solution and guarantees a perfect and even wetting of the surfaces to be disinfected.

Dispenser System

SoChlor Wipes are taken from a specially designed dispenser bucket by pulling them through an easy to use, resealable dispensing system. The system guarantees constant protection of the working solution from contamination and evaporation. Once impregnated with SoChlor DST, the wipes retain full efficacy for 10 days.

Efficacy & Testing

The only disinfectant wipes with a US EPA laboratory approved 4 minute C. diff spore kill time. EN Certified: BS:EN1650, BS:EN1276, BS:EN13704, BS:EN13697

Key Features

- Disinfectant & Cleaning Detergent in one wipe
- Ensures excellent release of active ingredients
- US EPA & European EN Certified
- Safe & stable for storage & transport
- Economical

ENVIRONMENTAL SURFACE DISINFECTION

Infection Prevention for Healthcare

SoChlor™ combines the most effective environmental disinfection solutions with everything GV Health knows about implementation, training and support for infection control healthcare professionals.

Effective against Fungal, Bacterial and Sporicidal activity. Designed to ensure best practice and enhance disinfection effectiveness while helping to save time and cost.

Available on NHS Supply Chain

SoChlor is supplied to UK NHS SC under the Bulk Pharmacy Contract, which is monitored closely by the BSA and DoH.

SoChlor has passed rigorous testing by NHS pharmacy and independent testing with BS:EN1650, BS:EN1276, BS:EN13697 & BS:EN13704.

SoChlor is developed and made in the UK.

SoChlor™ DST - Chlorine Disinfectant Tablets with Detergent

- For isolation and terminal deep clean, daily cleaning and disinfection in high risk areas and during infection outbreaks.
- Reduces terminal cleaning time by two thirds.
- Effective against MRSA, C-difficile, norovirus and other pathogens.

SoChlor™ TAB - Chlorine Disinfectant Tablets

- Chlorine is the chemical recommended by healthcare organisations around the world to disinfect surfaces after blood spills have occurred and for general environmental disinfection.
- Enables users to create a disinfectant solution with a specific concentration of chlorine.
- The tablet format is stable and easier to store and transport than liquid disinfectant solutions.

SoChlor™ Granules - NaDCC Chlorine Granules

- Fast acting granules absorb spillages
- Chlorine based disinfectant released on contact
- Neutralises pathogens and prevents spills spreading
- Protects against hidden sharps and broken glass in spills

CODE	PRODUCT
